Update fleets in time!

The Smart Tachograph is there.

How To Get Your Download Tools Generation 2 Ready.

What the fleet manager should know:

Starting June 15, 2019, commercial vehicles that are registered for the first time or newly equipped and over 3.5 metric tons in weight, must be fitted with a new generation digital tachograph.

The most important innovations
- Automatic positioning by GNSS.
- Secure data exchange for vehicle and driver. This facilitates further data protection compliant processing.
- Avoiding time consuming inspections via DSRC.
- The new tachograph hardware uses new encryption technology, requiring a software update to any existing download tools you may have in your fleet.
- Therefore, you need to update the appropriate download tools in your fleet.
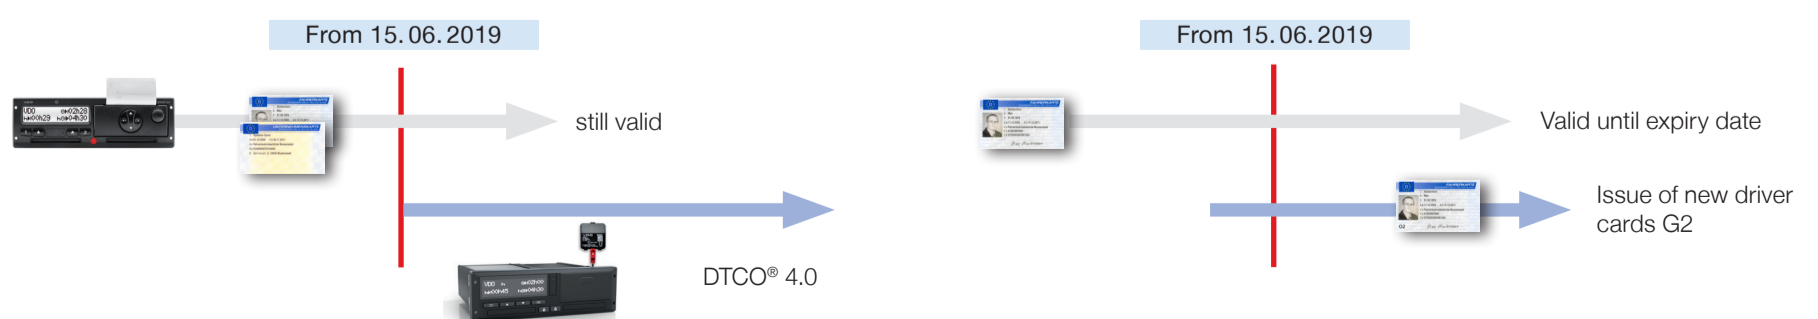

What the driver should know:

The DTCO® 4.0 allows secure the data exchange via the standardized ITS interface to fleet management systems like VDO TIS-Web®. Whether drivers have given their consent for their personal data to be transferred is also indicated.

The most important innovations
- The driver cards remain valid until expiry date and will be automatically replaced by the authorities through the new generation 2 driver cards.
- Both generations of driver cards (G1 and G2) are compatible with the DTCO® 4.0 and earlier versions.
- The DTCO® 4.0 records position data of the vehicle at start and end of the working period and after three hours of accumulated driving time.
- DSRC checks are made without personal information being used. Only incidents and security breaches during the journey are transmitted.

From 15.06.2019

still valid

DTCO® 4.0

From 15.06.2019

Valid until expiry date

Issue of new driver cards G2
